BrightPath Onboarding: Key Assumptions

The request was incomplete on purpose. Here's what I assumed, and why.

David | Eng. Manager — what's IN the plan

"Every department has different onboarding needs."

Assumed: each department gets its own tasks.

Both can be true — not a real conflict

A **detailed, department-specific plan**, but Emily's screen only shows **3 things at once**. Later phases start collapsed.

Emily | New hire — how much she SEES

"I just want to know what I should focus on first."

Assumed: show at most 3 tasks at a time.

Departments

Engineering, Sales and Customer Support have their own task templates. Any other department gets a **General** plan.

Why: HR can still onboard anyone, even without a template.

Managers

Every new hire has a manager, and managers only onboard people **in their own department**.

Why: 1:1s, equipment and goals depend on the manager; prevents a wrong assignment.

Who completes tasks

Only a task's **owner** can check it off. Joint tasks (1:1s, goals) need **both** the new hire and manager to confirm.

Why: A manager can't mark a 1:1 done that never happened.

Adding tasks

Managers add tasks for **their own hires**. HR adds tasks for anyone, and can assign one task to **many people at once**.

Why: Templates can't cover everything about one person.

Timeline

Phases by calendar day: **Before day 1**, **Week 1**, **Weeks 2–4**. New hires can log in before they start.

Why: Sarah said some tasks happen before the first day.

Scope

No real logins or database. A **"View as"** switcher stands in for logins; data is saved to a simple file.

Why: Enough to prove the workflow in a 3-hour prototype.

Open questions for Sarah

1. No manager yet? The app requires one today.

2. How are managers assigned: HR, or an HR system?

3. How private should tasks be from HR?
