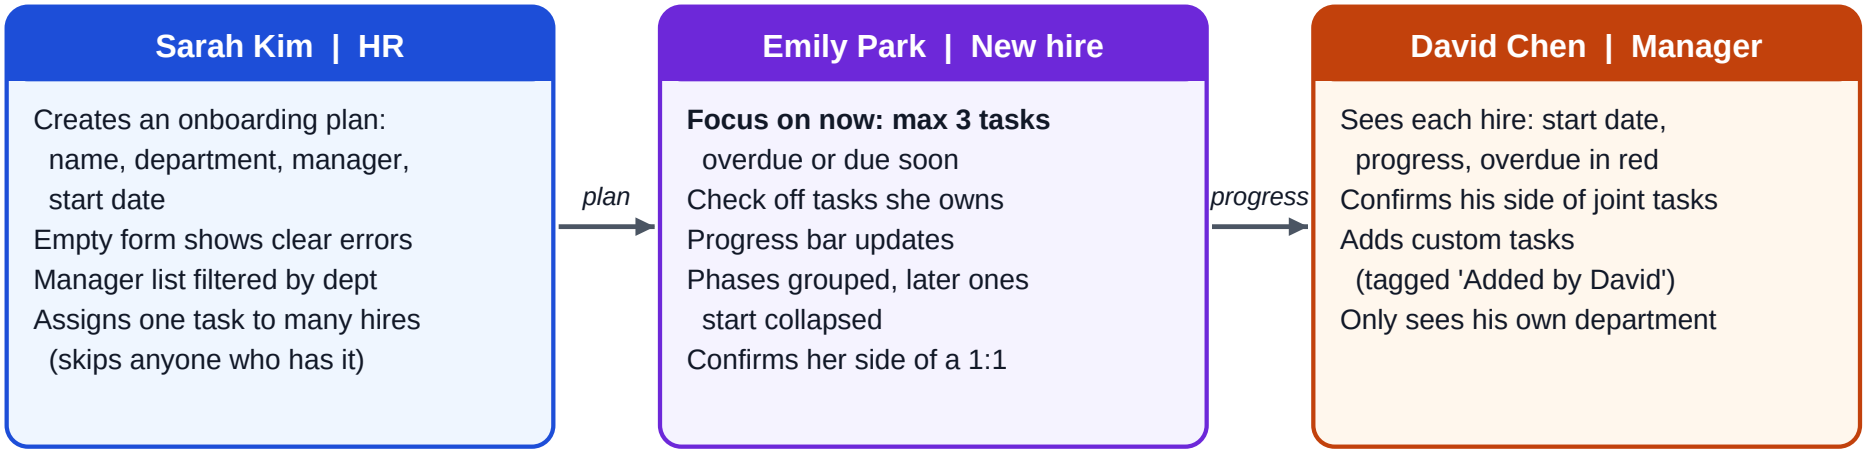
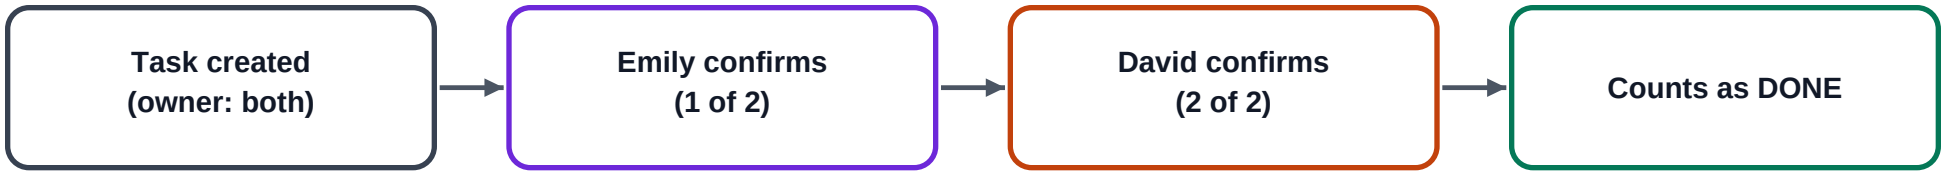
BrightPath Onboarding: Who Does What

One plan, three views. Main user: the new hire.



Joint task: First-day 1:1

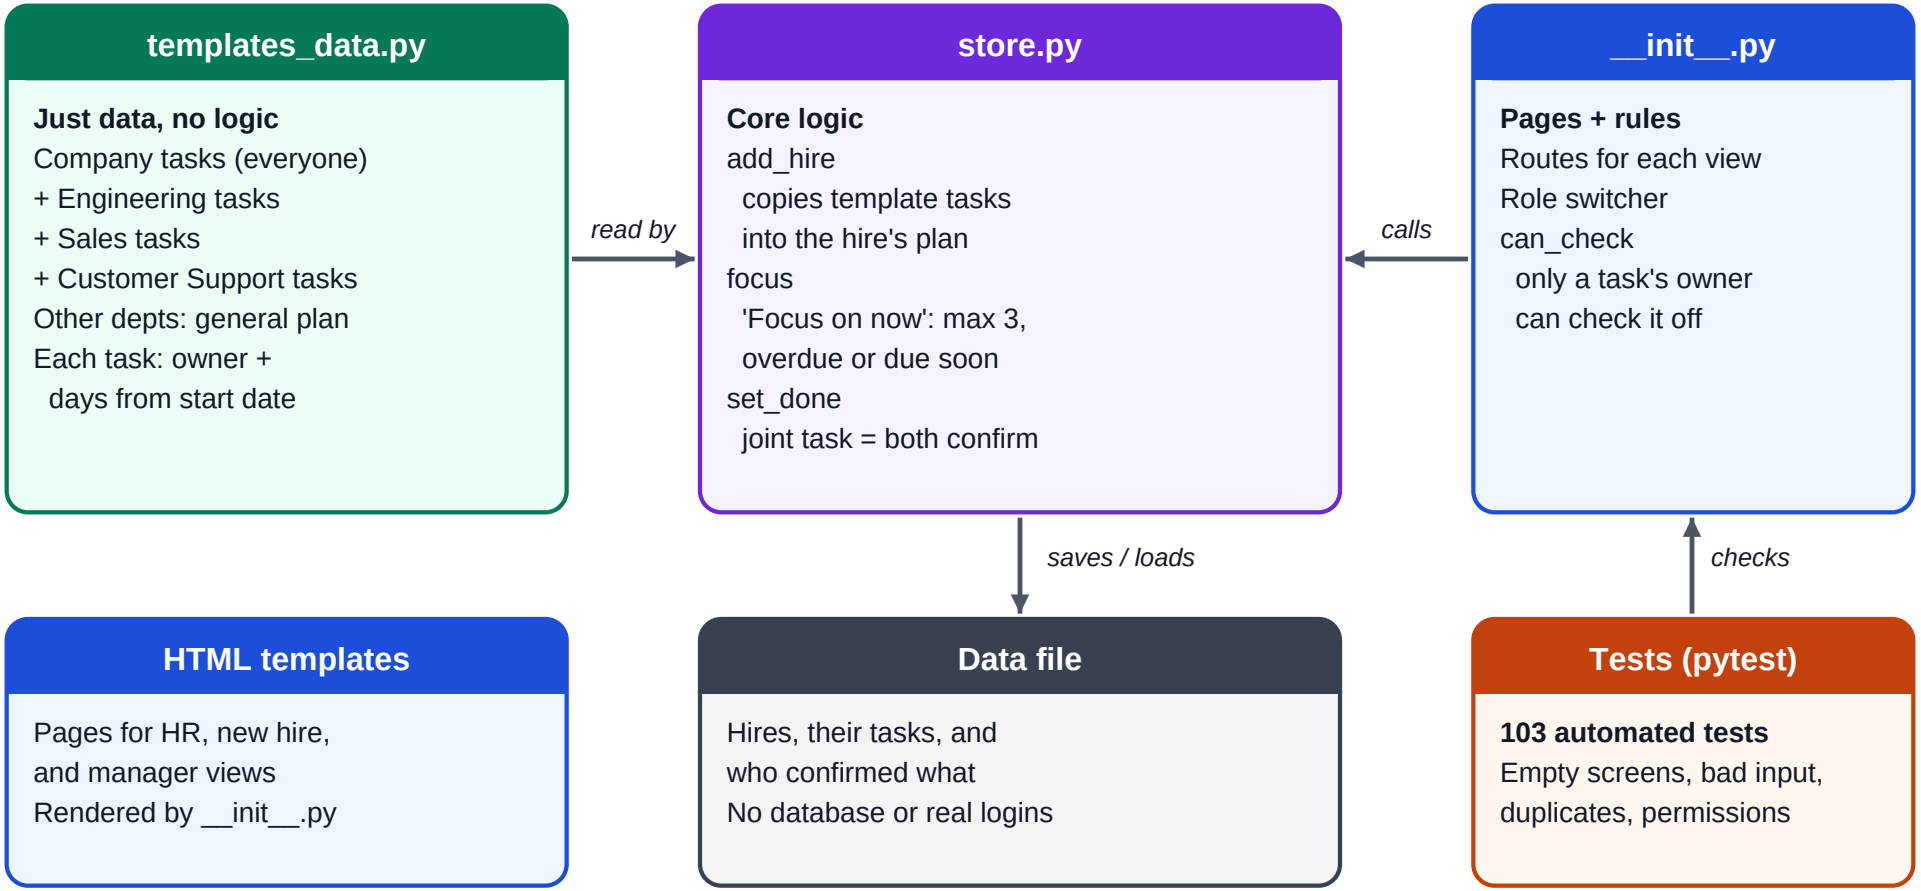


Neither person can mark a joint task done alone, so a manager can't check off a 1:1 that never happened.

David vs Emily: David is about what's IN the plan (department-specific). Emily is about how much she SEES (max 3 at once).

How the Code Works

Python + Flask web app, HTML templates, data saved to a simple file. Built with Claude Code in VS Code.



Flow: HR submits the form -> __init__.py checks input -> store.add_hire builds the plan from templates_data.py -> saved to the data file.

Tests caught a real bug (start page crash), fixed before recording. Ruff used for formatting.
